

1.6GHz Low Noise Amplifier

GENERAL DESCRIPTION

XC2404 series is an ultra-low-noise amplifier (LNA) with low operating voltage, low noise figure, low power consumption. The device offers easy output matching to 50 Ω for input and output with less external components.

The device operates at 1.2V. For higher power supplies such as 1.8V and 2.85V, the device can operate with a self bias of one adding resistor.

Note

1. This series is structurally weak in electrostatic discharge.
Please eliminate static electricity from the operational table, people, and soldering iron.
2. Please use noiseless power supply for stable operation.
3. Please use $\pm 1\%$ Rbias with $\pm 200\text{ppm}/^\circ\text{C}$ temperature stability and 10nF Cbias.
4. Please connect Cbias to V_{DD} pin as close as possible.
5. Please refer to the pattern layout. V_{DD} pins (V_{DD1} , V_{DD2} , V_{DD3}) should be connected each other outside. Also, V_{SS} pins (V_{SS1} , V_{SS2} , V_{SS3}) should be connected as well.
6. Please ensure to use an external component which does not depend on bias or temperature too much.
