DESCRIPTION

The *ISSI* IS61WV12824 is a high-speed, static RAM organized as 131,072 words by 24 bits. It is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields access times as fast as 8 ns with low power consumption.

When $\overline{CE1}$ is HIGH and CE2 is LOW (deselected), the device assumes a standby mode at which the power dissipation can be reduced down with CMOS input levels.

Easy memory expansion is provided by using Chip Enable and Output Enable inputs, $\overline{CE1}$, CE2 and \overline{OE} . The active LOW Write Enable (\overline{WE}) controls both writing and reading of the memory.

The IS61WV12824 is packaged in the JEDEC standard 119-pin BGA.

Notes:

1. Test conditions assume signal transition times of 1.5 ns or less, timing reference levels of $V_{DD}/2$, input pulse levels of 0.4v to $V_{DD}-0.3V$ and output loading specified in Figure 1.
2. Tested with the load in Figure 2. Transition is measured ± 200 mV from steady-state voltage. Not 100% tested.
3. The internal write time is defined by the overlap of $\overline{CE1}$ LOW, CE2 HIGH and \overline{WE} LOW. All signals must be in valid states to initiate a Write, but any one can go inactive to terminate the Write. The Data Input Setup and Hold timing are referenced to the rising or falling edge of the signal that terminates the write.

WRITE CYCLE NO. 1 (\overline{CE} Controlled, $\overline{OE} = \text{HIGH or LOW}$)

WRITE CYCLE NO. 2⁽¹⁾ (\overline{WE} Controlled: $\overline{OE} = \text{HIGH during Write Cycle}$)

WRITE CYCLE NO. 3⁽¹⁾ (\overline{WE} Controlled: \overline{OE} IS LOW DURING WRITE CYCLE)

Note:

1. The internal Write time is defined by the overlap of $\overline{CE1} = \text{LOW}$, $\overline{CE2} = \text{HIGH}$ and $\overline{WE} = \text{LOW}$. All signals must be in valid states to initiate a Write, but any can be deasserted to terminate the Write. The Data Input Setup and Hold timing is referenced to the rising or falling edge of the signal that terminates the Write.
