Machines	(Not Defined)	ST Shenzhen (China)

**4. Description of change**

	Old	New
<b>4.1 Description</b>	Assembly & Test of Automotive EEPROM in SO8N package at ST Shenzhen (China) are upgraded from High Density (HD) strip test line...	...to Super High Density (SHD) strip test line. SHD Assembly line runs with higher parallelism and same assembly flow as current HD line. As continuous improvement, a step of plasma cleaning has been introduced between die attach and wire bonding. A rationalization of the leadframe dimensions has been done. SHD strip test line runs with higher parallelism and same test flow and test sequence as current HD line. SHD strip test line runs with same test equipment as current HD line.
<b>4.2 Anticipated Impact on form,fit, function, quality, reliability or processability?</b>	Form: visual on package top side / backside - Fit: no change - Function: no change	

**5. Reason / motivation for change**

<b>5.1 Motivation</b>	Automotive grade EEPROM products in SO8N are widely used in high volume at all automotive customers and in all automotive applications. To maintain high level of service and to support high volume production on the long-term, ST has decided to switch Assembly & Test from High Density (HD) strip test line to Super High Density (SHD) strip test line. Both lines are installed in ST Shenzhen (China). SHD strip test line already produces very high-volume of EEPROM SO8N products for industrial market since year 2012.  The strategy of the STMicroelectronics Memory division is to support our customers on product and service quality on a long-term basis. In line with this commitment, this change will secure long term availability and automotive SO8N capacity while improving product manufacturing quality.
<b>5.2 Customer Benefit</b>	QUALITY IMPROVEMENT
